Uses of Regional Visibility Modeling Results Training

The motivation for this training presented by WRAP Regional Modeling Center staff is to introduce the data sets and models being used in the visibility modeling that is currently being performed in support of the Attribution of Haze project, and eventually as supporting §308 SIPs and TIPs. Training will also include the use of visualization tools to access and display results of the visibility modeling. The intended audiences for this training are state and tribal users of modeling results, not the modeling practitioners. The modeling data and results used in this training will be those currently in use by the Attribution of Haze Workgroup.

Monday, September 20<sup>th</sup>
